Bring greater intelligence to your print devices with RICOH Intelligent Barcode solution and quicksets.

Unlock smart printing features like intelligent copying, form feed control, stapling, punching, and watermarking—all applied directly to your print job through Quicksets, our innovative macro technology.

These Quicksets come in three dynamic varieties to cater to your unique printing needs:

Pre-built Quicksets:
These ready-made settings act upon print job content. For example, they can ensure all Outlook prints are in grayscale and duplex mode or stamp every page with a QR code watermark, carrying the username, date, and time.

Letterhead Quicksets:
Streamline your corporate printing tasks with these macros that add content or finishing touches to suit your organisation. Easily upload a background image like your corporate letterhead, logo, or watermark for consistent branding. Opt for enforced stapling or punching to prepare documents effortlessly.

You can even print Terms & Conditions on the back of each page for seamless compliance. Make these one-click settings part of your workflow to simplify and professionalise your printed documents.

Reprint Quicksets:
Maximise efficiency with these macros that let you print multiple copies while specifying the tray for each output. Need 2-4 copies? Select the appropriate tray for each and add specific overlays per copy. This feature saves you time on manual tasks and eliminates the need for dedicated software for transactional documents, like delivery slips, that require different coloured paper from separate trays—much like carbon copies on matrix printers. Transform manual chores into a click-and-go experience.

Custom Quicksets:
With Custom Quicksets, you can have your Ricoh device execute your specialised printing requirements without having to change your legacy print flows. There's no more need act on the server level, adjustments can be programmed at the device level thanks to your custom Quickset.
